

METZGER/McGUIRE

ACADEMY

Who should attend Metzger/McGuire Academy?

Installation contractors, concrete polishing contractors, architects/engineers, general contractors, facility owners – basically anyone interested in learning more about the proper preparation and installation of concrete floor joint fillers and repair products both for industrial and stained/polished concrete floors.

Why should you plan to attend Metzger/McGuire Academy?

Metzger/McGuire Academy was established to provide hands-on and classroom training on all aspects of concrete joint filling and repair including optimal use of Metzger/McGuire products, typical jobsite conditions, best practices and equipment for preparing and finishing joints and floor defect repairs and much, much more. During the course many aspects of a typical joint filling or repair project are covered including bidding and planning, handling variable jobsite conditions, troubleshooting concrete floors and more. Whether you are new to the industry, have new personnel to train, or would just like a refresher and exposure to new products or techniques, we guarantee you will leave Metzger/McGuire Academy with new knowledge that can help you improve the efficiency and quality of your concrete joint filling and floor repair work. Metzger/McGuire Academy graduates will receive an Academy certification card and are eligible for any of the individual manufacturer certification cards required by many national specifications to do work on retail and other concrete repair joint filling projects. The number of employees a company has with certification cards can also be an important factor in helping a company achieve *Metzger McGuire Approved Applicator* or *Approved Repair Contractor Status*.

DURING THE ACADEMY YOU WILL LEARN:

- All aspects of floor joint filling in both industrial and stained/polished concrete floors
- All aspects of floor joint repair from the repair of minor edge spalling or routine joint maintenance to complete joint edge rebuilding and joint restoration
- Identification, material selection and repair methods for different types of cracks
- Material selection and repair methods for surface defects like pop-outs, spalls and micro-pitting
- How to identify potential joint or surface problems in new concrete floors
- How to troubleshoot post-installation issues which can result from floor factors beyond the installer's control
- Best equipment options to tackle joint filling and repair operations.
- Proper sequencing of repair and/or joint filling operations on stained/polished concrete floor projects; how to handle these operations after the fact
- How to adjust for project conditions which can adversely impact material finishing
- Proper installation and finishing techniques for Metzger/McGuire materials, including:
 - MM-80 Heavy Duty, Semi-Rigid Epoxy Joint Filler
 - Edge-Pro 90 and Spal-Pro RS 88 Semi-Rigid Polyurea Joint Fillers
 - Edge-Pro 80 Moisture Tolerant Polyurea Joint Filler
 - SPF Stain Prevention Film
 - Spal-Pro 2000 Rapid Set Polyurea Repair Polymer
 - Armor Hard Structural Epoxy Repair Mortar
 - Rapid Refloor/RRXP Concrete Repair Products
 - SRG Surface Refinement Grout and more..

Class size is limited to 24 attendees to ensure personalized attention and hands on opportunities.

TYPICAL AGENDA

DAY 1:

Start-End		Products/Equipment Covered

Attendee Feedback

“Your team was very patient and friendly. Your company teaches excellent skills, techniques and provides the best product out there. Thanks very much for the valuable training experience.”

“The training (Academy) you did onsite was excellent as always and your team’s follow through was flawless as usual.”

“My sincere thanks for providing a very professional and informative training opportunity. The level of expertise, detail and service offered illustrates a level of commitment few can match. The synergy is palpable and the company chemistry (no pun intended) is undeniable.”
